SUMMARY

Full-stack Tech Lead with 15+ years building enterprise web platforms in TypeScript, Node.js, React/Angular, and GCP. Led a rollout to 16k active plans, exceeding the annual conversion target by 111%. Won approval for a design to decouple a product from a legacy monolith and led a B2B overhaul that increased positive customer feedback by 21%.

TECHNICAL SKILLS

Languages & Runtime: TypeScript, JavaScript (ES6+), Node.js, Python

Frontend: React, Angular, NgRx, RxJS, Vue.js, micro-frontends, i18n, feature flags, SCSS/Sass, Tailwind

Backend & Cloud: Node.js services, REST, GraphQL, Nginx, Google Cloud Platform (Cloud Run), HashiCorp Vault

Data & Caching: Redis, Firestore, NoSQL document stores, MySQL, SQLite

Enterprise / Commerce: SAP Spartacus (Composable Storefront), SAP Hybris, Stibo PIM, Adobe Experience Manager, SFMC

Quality & Tooling: WCAG AA / A11y, SonarQube, Sentry, Selenium, GitHub Actions CI/CD, Google Analytics

AI tooling: Windsurf (team code review), LLM APIs, Python multi-agent pipelines

EXPERIENCE

Colgate-Palmolive | Tech Lead | Remote | July 2025 – Present

- **Scale & launch:** Led rollout and technical cutover of the React-based Feeding Calculator across 10+ markets, reaching 16k active plans and exceeding the annual conversion target by 111%.
- **Architecture:** Designed and won approval to remove the Feeding Calculator's dependency on the legacy Pro Referral Platform monolith, so the product scales by region independently.
- **Caching:** Hardened the Redis cache Feeding Calculator uses for Stibo PIM and Adobe Experience Manager product data: changed cache strategy and added integrity checks so scheduled refreshes no longer overwrite Redis when payloads are corrupt or missing.
- **Data flows:** Queried Adobe Experience Manager through GraphQL and Stibo PIM through REST, and persisted Feeding Calculator recommendations to Firestore.
- **Reliability:** Diagnosed and fixed production backend failures using Google Cloud Run logs, tracing root causes across distributed service boundaries.
- **Stabilization:** Took over VetReco after the prior lead left abruptly; removed single-point-of-failure dependencies and added onboarding docs, cutting emergency escalations ~80% so any engineer can deploy.
- **Security:** Wrote an Nginx configuration to block direct access to a production microapp and coordinated with DevOps to restrict direct access through Akamai.
- **Delivery:** Rolled out Windsurf-assisted code review across the team, plus SonarQube gates and Sentry tracing.
- **Localization & configuration:** Implemented i18n and feature flags for Hill's Pet/Vet experiences and Stibo/AEM product sources; delivered through existing GitHub Actions workflows.
- **Delivery coaching:** Coached developers on scope negotiation, improving consistency of sprint completion.

Colgate-Palmolive | Sr. Front-end Developer | Remote | May 2020 – June 2025

- **Platform modernization:** Led the legacy B2B frontend overhaul in Angular, using NgRx and RxJS extensively; increased positive customer feedback by 21%.
- **Services:** Built a Node.js microservice using HashiCorp Vault for secure authentication between SAP and Azure Blob Storage.
- **Developer tooling:** Built an Nginx reverse proxy that unified the team's microapps behind a single endpoint, removing a longstanding blocker to end-to-end testing.
- **Architecture:** Designed and prototyped a slot-based content system for a multi-site e-commerce platform; approved by leadership for adoption.
- **Technical strategy:** Defined the core frontend stack for Hill's To Home 2.0; enterprise architecture adopted it as the template for future external web projects.
- **Accessibility:** Led WCAG AA remediation after an urgent legal request and brought web properties to full compliance.
- **Security:** Ranked 3rd of 80 senior developers in Secure Code Warrior: Code Tycoon 2023; recognized by the CISO.
- **Mentoring:** Mentored four interns through platform onboarding and technical development; two subsequently entered full-time roles.
- **Hiring:** Developed frontend interview questions grounded in the team's work and interviewed candidates against technical and team requirements.

Trek Bicycle | UI Engineer | Waterloo, WI | Nov 2016 – May 2020

- **Modularization:** Migrated ~50 legacy JSP files into reusable, modern Vue.js components, reducing duplicate code ~30%.
- **Performance:** Found and fixed site-wide performance bottlenecks by optimizing images, caching, and removing dead code, improving the Chrome Lighthouse score by 7 points.

SysLogic | Information Systems Consultant | Milwaukee, WI | Jan 2010 – Oct 2016

- **Delivery & automation:** Rebuilt the company website in Angular with management stakeholders, and added a Selenium suite that cut manual testing time ~70%.

SIDE PROJECTS

- **Erratic Drummer:** Android drum-pattern composer — ~10k downloads, 4.5/5 on Google Play.
- **Pythia:** Python multi-agent pipeline over prediction-market APIs, with LLM research agents and automated position sizing.

EDUCATION

MS, Computer Engineering — National University of Malaysia (UKM)

BS, Computer Engineering — Azad University of Tehran
